Abstract of JP 2004110791 (A)

PROBLEM TO BE SOLVED: To automatically allocate computing resources of a rack blade computer assembly. ; SOLUTION: This method includes: receing server performance information from an application server pool arranged in the rack of the rack blade computer assembly, to determine at least one QoS attribute (for example, set of GoS attributes) for the application server pool; to determine that the GoS attributes are lower than standard; and to allocate a blade server from a free server pool to be used by the application server pool. ; COPYRIGHT: (C)2004,JPO
